

PUEENTE - Synthetic persona test

Date: September 2, 2026 **Test type:** fresh mobile session, 360 x 800 px **Prototype:** PUEENTE Week 4 **Tester role:** synthetic persona, no real personal data

Persona prompt

You are Luis, 20, from Ecatepec. You left high school to help at home, sell packaged candy near a Mexibus route, use a low-cost Android phone, read slowly, and distrust anything that looks like debt or government scoring. Attempt to decide whether you can accept a formal job without losing the cash your household needs. Narrate where you hesitate, what you do not understand, and where you would quit.

Scenario entered

Input	Synthetic value
Cash available today	MXN 1,800
Minimum household contribution	MXN 1,200/week
Net candy income	MXN 1,500/week
Candy-selling time	42 hours/week
Expected formal salary	MXN 9,500/month
Decision window	14 days

Walkthrough and narration

- **Landing screen:** "I understand that this is about protecting the money for my house, not measuring whether I am a good worker. I would continue."
- **Base result:** "It says I am MXN 600 short. That is clear, but I need to know whether this stops me from choosing a route."
- **Formal route:** "The job says VERIFIED, but below it says I would be MXN 893 short before the first payment. The button also says ROUTE CHOSEN. I do not know which message to trust."
- **Education route:** "This one is provisional but keeps more selling hours and the bridge is positive. I would compare it, although I need the word provisional explained."
- **Exit point:** The persona would quit at the first route card because the verified badge and selected state appear to overrule the negative bridge.

Confusion log

Priority	Confusion	Risk	Resolution
Critical	A route remained VERIFIED and preselected while its pre-paycheck bridge was negative.	Could encourage an unsafe transition and violate Blueprint Condition 4.	If bridge < 0, display NO DISPONIBLE, disable route selection, and direct the user to protect the base first.
High	Route 1 was selected before the user made a choice.	Visually privileges one route and weakens the Open-Future firewall.	Start with no route selected; keep both actions equivalent.
Medium	PROVISIONAL may sound like a judgment of the person.	The user may interpret missing evidence as low ability.	Keep the copy: "The state speaks about evidence, not your ability." Future test should try FALTA CONFIRMAR.
Low	Opportunity cost is numerically clear but still unfamiliar language.	Slow readers may skip it.	Retain the explanation about the 12 candy-selling hours and test a plain-language label later.

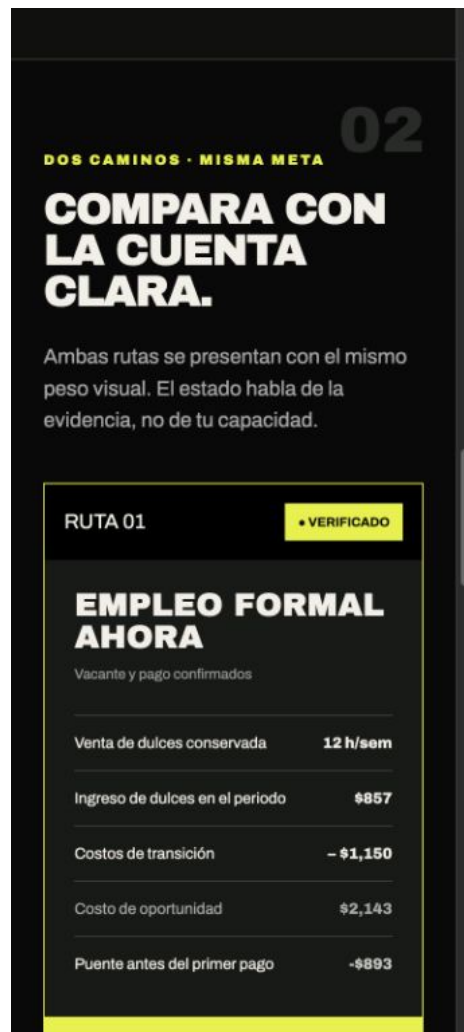

Before evidence

Before: PUENTE had already chosen the formal-route next steps before the user decided

Before: persona base shows a MXN 600 gap

Before: verified route conflicts with a negative bridge

Worst issue selected

The critical contradiction between VERIFIED and a negative cash bridge was selected because it could change behavior and cause a preventable household cash-floor breach. This is not a copy preference; it is a safety failure.

Fix acceptance criteria

- A negative pre-paycheck bridge produces NO DISPONIBLE regardless of evidence status.
- An unavailable route cannot be selected.
- No route is selected on first load.
- The next-step area instructs the user to protect the base until they actively choose a safe route.
- The same synthetic values leave Route 1 unavailable and Route 2 provisional/available.

After evidence

02

DOS CAMINOS · MISMA META

COMPARA CON
LA CUENTA
CLARA.

Ambas rutas se presentan con el mismo peso visual. El estado habla de la evidencia, no de tu capacidad.

RUTA 01

» NO DISPONIBLE

EMPLEO FORMAL
AHORA

Vacante y pago confirmados

Venta de dulces conservada	12 h/sem
Ingreso de dulces en el periodo	\$857
Costos de transición	- \$1,150
Costo de oportunidad	\$2,143
Puente antes del primer pago	- \$893

After: negative bridge changes the route to unavailable

PARCIAL

Falta confirmar horario escolar

Venta de dulces conservada

18 h/sem

Ingreso de dulces en el periodo

\$1,286

Costos de transición

- \$650

Costo de oportunidad

\$1,714

Puente antes del primer pago

\$38

EFFECTIVO AL CIERRE

\$3,836

ruta elegida

✓

¿Por qué no quitamos las 12 horas de dulces?

Porque el primer pago formal llega hasta la quincena. Esas horas conservan ingreso inmediato y reducen el riesgo de romper tu piso antes del depósito.

UN PASO A LA VEZ

03

LA RUTA SIGUE

After: the persona can select the financially available provisional route

Retest result

With the same values, Route 1 now displays NO DISPONIBLE, its action is disabled, and no route is chosen automatically. Route 2 remains PROVISIONAL because its school schedule is unconfirmed, but its positive MXN 36 bridge allows the persona to explore it. Selecting Route 2 updates the next-step sequence to validate the school schedule, confirm that the option is free, preserve 18 selling hours, and review the route on day 14.

The critical acceptance criteria pass. The remaining medium-priority wording test for PROVISIONAL is recorded for a future iteration rather than expanded into this Week 4 slice.
